Guide to standards and products

EEC guideline 89/686 on personal protective equipment (PPE)

Depending on the hazard potential the protective clothing is intended to protect against, PPE is divided into 3 categories:

**Category I:** Basic PPE protects against minimal risks.

**Category II:** PPE that cannot be clearly classified under Category 1 or 3 is assigned to Category 2.

**Category III:** PPE of complex design is intended to protect against danger to life or serious and irreversible injury to health.

Disposable protective clothing
Silver for added safety you can rely on –
Disposable coveralls with an active anti-bacterial surface

How AgPURE™ works

Highly effective protection against bacteria, yeasts and fungi. AgPURE™ consists of inorganic particles which measure just a few nanometres. In the outermost layer of each nanoparticle are individual active silver ions.

AgPURE™ combats microorganisms in 3 stages:

1. Reduces the build-up of microbes
   Fewer colonies, poor growth conditions
2. Disrupts cell metabolism by removing potassium ions
   Reduces the viability of microorganisms
3. Irreversible reactions with amino acids containing sulphur
   Destroys proteins and DNA/RNA

uvex disposable protective clothing with vibatec offers your service teams reliable protection. This has been confirmed on the basis of scientific tests by the Hohenstein Institute. The powerful antibacterial action of the protective suits with a bacteria reduction [log CFU] factor of ≥ 3 has been tested and certified.

Testing of the antibacterial activity in accordance with DIN EN ISO 20743:2007-10 (DIN test for fabric surface and materials)

- Recognised process for testing antibacterial effectiveness of surfaces and fabrics containing silver.
- Certification of bioactive products.
- The German Hohenstein Institute played a key role in the development of this recognised standard.

Disposable protective clothing
Disposable coverall chemical protection Type 3B

uvex 3B extra vibatec

The innovative double placket system with two velcro zipper flaps and the double cuff simplifies the donning and removal of the coverall, and reduces the need for extra sealing tape.

Properties
- Impervious to liquids
- AgPURE active layer provides an optimum level of safety when working with biological hazards
- Protection against a wide range of chemicals
- High wearer comfort and maximum freedom of movement because of the ergonomic design
- Lightweight, flexible and low-noise material
- Soft-textured nonwoven on the inside is particularly skin friendly
- Elasticated waistband for a perfect fit
- Thumb loops prevent sleeves sliding up the arm
- Easy to don and remove due to the velcro fastening
- Hood and mask attachment system for optimum fit

Areas of application
- Work with organic and inorganic chemicals
- Industrial cleaning and maintenance work
- Tank cleaning
- Work with varnishes and paints
- Agribusiness and agriculture
- Oil and petrochemicals

Special areas of application (biohazards)
- Disaster response and emergency services
- Disposal of hazardous materials and waste management
- Decontamination and remediation of contaminated sites
- Sewage treatment and drainage construction
- Veterinary medicine and disease control
- Specialist laboratories
- Pharmaceutical industry and laboratories

uvex 3B extra vibatec Material Composition

The uvex 3B extra vibatec has an innovative active layer with AgPURE™ that provides outstanding active antimicrobial protection against biological hazards (R value ≥ 3).

Active layer with AgPURE™
- Liquid-tight polypropylene film
- Spunbond

Disposable protective clothing
Disposable coverall chemical protection Type 3B

uvex 3B classic

The highly effective barrier created by the extremely durable material combined with ultrasonically welded and taped seams provides maximum safety.

Properties
• Impervious to liquids
• Protection against a wide range of chemicals
• Extremely light and durable material
• Skin friendly due to the soft-textured nonwoven on the inside
• Elasticated waistband for a perfect fit
• Maximum freedom of movement
• Middle finger loops prevent sleeves sliding up the arm
• Zipper flap for optimum protection
• Comfortable zip puller to ease of use
• Protection against pathogens

Areas of application
• Oil and petrochemicals
• Cleaning and maintenance work
• Chemical and pharmaceutical industries
• Soil remediation and dismantling
• Industrial cleaning and maintenance work
• Tank cleaning
• Work with varnishes and paints
• Disposal of hazardous materials
• Agricultural industry

uvex 3B classic Material Composition

The extremely light and tight spunbond-polypropylene-laminate provides an effective barrier against many organic and inorganic liquid chemicals. The mechanical strength of the material and the sealed, taped seams allow the uvex 3B classic to provide protection against the highest strains without reducing comfort.
Disposable protective clothing
Disposable coverall chemical protection Type 4B

Exceptional wearer comfort guaranteed by breathable, light and flexible material.

Properties
- Spray tight
- Taped seams offer optimum protection
- Two way zipper with selfadhesive cover flap
- Elasticated waistband for a good fit
- Middle finger loops prevent sleeves sliding up the arm
- Certified for protection against pesticides in accordance with DIN 32781
- Free from silicone and substances that interfere with wetting agents
- Suitable for cleanroom environments Class 7 in accordance with ISO 14644-1
- Orange contrast colour for improved visibility
- Antistatic properties

Areas of application
- Work with low-toxic inorganic chemicals
- Low-pressure cleaning work and industrial cleaning
- Ship and automotive construction
- Work with varnishes and paints
- Agriculture and horticulture (pesticide protection)
- Pest control
- Electronics and cleanroom environments
- Work with asbestos and dismantling
- Remediation of contaminated sites
- Pharmaceutical industry and laboratories
- Sample collection
- Livestock breeding and veterinary medicine

uvex 4B Material Composition
The microporous spray-tight spunbond-polyethylene-laminate enables the uvex 4B to provide both protection and breathability. The taped seams provide outstanding protection against liquid aerosols and solid particles while the spunbond material inside makes it comfortable to wear.

Stitched and taped seams
Optimum protection against penetration by liquid aerosols and solid particles

Middle finger loops for firmly securing the sleeves
Disposable protective clothing
Disposable coverall chemical protection Type 5/6

uvex 5/6

The combination of breathable, extremely light polyethylene laminate combined with the air-permeable SMS back section provides a high level of moisture management and breathability, without reducing protection.

Properties

• Particle-tight and spray-tight to a limited extent
• Bound seams and elastics in contrasting colours for visible safety
• Soft bound elastics at hood hem, arm and foot cuffs
• Two way zipper with selfadhesive cover flap
• Middle finger loops prevent sleeves sliding up the arm
• Elasticated waistband for a perfect fit
• Free from silicone and substances that interfere with wetting agents
• Suitable for cleanroom environments Class 8 in accordance with ISO 14644-1
• Antistatic properties

Areas of application

• Work with particulate chemicals
• Varnishing and protection against paint splash
• Fibreglass production and processing
• Industrial cleaning and maintenance work
• Food industry
• Automotive industry
• Grinding and polishing work, cement manufacturing
• Quarry and mining work
• Demolition work and renovation
• Wood and metalwork, construction industry
• Cleanroom environments

Spunbond
Disposable protective clothing
Disposable coverall chemical protection Type 5/6

uvex 5/6 classic
The microporous spunbond laminate material of this extremely light and breathable coverall ensures an exceptional combination of outstanding wearer comfort and reliable protection.

Properties
• Particle-tight and spray-tight for limited exposure
• Soft, skin friendly material
• Ergonomic fit for high wearer comfort
• Elasticated waistband for a more tailored fit
• Selfadhesive zipper flap for increased protection and safety
• Antistatic properties

Areas of application
• Chemical and pharmaceutical industries
• Painting
• Fibreglass, ceramic fibre and synthetic resin production and processing
• Construction industry
• Wood and metalwork
• Industrial cleaning
• Automotive industry
• Grinding and polishing work, cement manufacturing
• Quarry and mining work
• Demolition work and renovation
• Police and fire services
• Maintenance work

uvex 5/6 classic  Material Composition
The uvex 5/6 classic is made of an extremely light, microporous spunbond polyethylene laminate. Wearers are comfortable due to the soft, skin friendly material and combined with durable seams, providing a high level of protection against particles and light mist spray.

Disposable coverall chemical protection Type 5/6

uvex 5/6 climazone

The extremely light and very breathable SMS material provides a high level of moisture management and exceptional wearer comfort, making this coverall particularly suited to being worn in warm work environments and for extended periods.

Properties
- Particle-tight and spray-tight for limited exposure
- Exceptional protection and wearer comfort during work involving high dust exposure
- Selfadhesive zipper flap
- Middle finger loops prevent sleeves riding up the arm
- Elasticated waistband for a more tailored fit
- Three-part hood for a good fit and unhindered vision
- Antistatic properties

Areas of application
- Work with dust and powder chemicals
- Working with asbestos
- Fibreglass, ceramic fibre and synthetic resin production and processing
- Construction industry
- Wood and metalwork
- Automotive industry
- Grinding and polishing work, cement manufacturing
- Quarry and mining work
- Redevelopment and renovation work

As a leader of innovation, we place the highest demands on the products and services which we offer our customers. The uvex Chemical Expert System (CES) has been developed by experts for experts. It can be accessed anytime and anywhere in the world. This web-based tool helps you select the appropriate disposable safety clothing.

**Online chemicals database**

The uvex Chemical Expert System (CES) offers an extensive chemicals database for choosing the appropriate safety gloves for working with hazardous substances. As a user, you can create a personal permeation list or receive advice from our specialists. It only takes a few clicks of the mouse to find the right disposable safety clothing and chemical safety gloves to match your specific requirements.

**Advantages of the uvex Chemical Expert System:**

- Extensive database of tested chemicals
- Individual creation of a permeation list
- Easy selection of disposable safety clothing and chemical safety gloves
- Personal account with premium functions

uvex – advice and product expertise from a single source.

Please pay attention!

To ensure a perfect fit and to guarantee maximum safety when working with hazardous substances, the uvex range is available in a wide range of sizes. The table shows the body measurements and the corresponding uvex sizes. These size definitions are based on actual body measurements taken while wearing underwear but without wearing shoes. These sizes differ from standard clothes sizes, so please always select uvex coverall according to your actual body measurements and not your usual clothes sizes!

For optimum protection, safety and comfort.

Your employees face various hazards in the course of their daily work. Everything from light liquid splashes or spillage of liquids to work with hazardous chemicals and radioactive material in industrial use. Therefore, it is important to consider the breakthrough time of permeation for protective coveralls.

Permeation is the process by which a chemical moves through a protective clothing material on a molecular level. Molecules of chemicals are absorbed into the outer surface of a material, then diffuse across the fabric and are released on the inner surface. The permeation resistance of uvex fabrics to hazardous substances is determined by measuring the chemical breakthrough time of chemicals through a material. Permeation tests for our protective coveralls have been conducted according to EN ISO 6529/EN 374-3.

The data listed in the table above were developed under laboratory conditions. As additional influences such as higher temperatures and mechanical strain often occur in practice, these data should only be used as a guideline. Seams and zipper closures may have lower breakthrough times, particularly when damaged or worn. The data is without commitment and does not substitute extensive suitability tests.

For more information on test methods or permeation testing of your specific chemical please visit uvex-safety.de or contact our customer service department directly on 0800-66 44 893 (for calls within Germany) or +49 (0) 911-97 36-0 (for calls from outside Germany).

We will be happy to help.

*The data listed above refer to SMS back panel fabric. Main body fabric has equal or higher performance, but suit classification is based upon the lowest performing component.*
Disposable protective clothing

Guidelines for use

Using uvex disposable protective clothing

Prior to use it is essential to check the protective coverall for any damage e.g. broken seams, defective zipper closure or other visible defects which may impair its protection levels.

Storage
uvex disposable protective clothing must be stored in its original packaging in a dry place away from sun light.

Disposal
The products must be disposed after use in accordance with respective rules and regulations. The products are only suitable for a single use.

Washing disposable suits
The disposable suits are only suitable for a single use and must not be washed.

Please note
It is the responsibility of the user to decide which product is most suitable for the intended application. Under no circumstances can uvex accept responsibility for the incorrect application and use of these products. For enquiries or additional information, please visit uvex-safety.de

or contact our customer service department directly on 0800 664 4893 (for calls from within Germany) or +49 (0) 911 97360 (for calls from outside Germany).

We will be happy to help.

Donning and removal of the disposable protective coverall

In accordance with the ruling of the German Committee for Biological Agents (ABAS), the PPE should be put and taken off as follows:

Putting the PPE on:

- Before putting the PPE on, check all parts to ensure none are missing or damaged
- Remove jewellery and watches
- Put on the suit and zip it up to the hips
- Put on the boots
- Put on the filtering face mask and check its tight fit
- Put on the safety glasses
- Pull the hood of the suit over your head and zip the suit until it is completely closed. To cover the chin and the zip, press the front flap into place
- Put on the safety gloves and pull them over the cuff of the sleeves

Taking the PPE off:

- Disinfect the safety gloves but do not remove
- Pull down the hood and pull the suit over the shoulders, turning it inside out down to the hips. At the same time, pull your arms out of the sleeves (a second person with safety gloves and a filtering face mask can help)
- Take the suit completely off, removing the boots at the same time
- Remove the safety gloves by pulling them inside out
- Remove the glasses by drawing them forward from the back and place them in the designated place
- Remove the filtering face mask in the same way
- Disinfect your hands and finish off by thoroughly washing your hands, face and any other contaminated areas of skin with water and a disinfectant lotion
